Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	10	6 Days	24 Oct 2022	29 Oct 2022	10	- (Meet Planned Date)
Sprint-2	11	6 Days	30 Oct 2022	4 Nov 2022	11	- (Meet Planned Date)
Sprint-3	9	6 Days	6 Nov 2022	12 Nov 2022	9	- (Meet Planned Date)
Sprint-4	10	6 Days	12 Nov 2022	18 Nov 2022	8	- (Meet Planned Date)

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

Average Velocity:

Average Points per sprint = (10+11+9+8)/4=9.5

Story points per day/average velocity = 9.5/6.5=1.461

Burndown Chart:

A burndown chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burndown charts can be applied to any project containing measurable progress over time.

The burndown chart can only be generated once a sprint or two is completed. It currently doesn't generate a burndown chart. We all upload the same to the Jira Files directory as and when our burndown chart gets updated.
